

## REPHANOL 'ORG' MEMBRANE

REPHANOL 'ORG' lining is a poly iso butylene membrane manufactured in Germany and available in sheets of 1.50 to 3.0mm thickness. These membranes are stuck to concrete or steel bases with adhesives and joints are overlapped. These overlapped joints are hot seam welded. They are used as inter liner membranes in Galvanizing Tanks, Pickling Tanks, and Anodic Oxidation Tanks and where electrically conductive ceramic tiling is required. They are extensively used in **Sulphuric Acid Towers & Equipments**
